

Community Lost and Found Item Tracking System

The Lost and Found Item Tracking System is designed to help users report, search, and recover lost items efficiently within a school or community. Users can post details about lost or found items, including descriptions, location, date, and images. The system allows other users to view listings and contact the owner or finder.

The system improves the chances of recovering lost belongings by organizing reports in a centralized platform. It also includes an admin who monitors posts, verifies reports, and ensures that all entries are valid and appropriate.
